

Photomultiplier Tube

Model: OPR-PMT1013-BB

Features

- Wide Spectral Response
- High Gain
- High Cathode Sensitivity

Applications

- Environment Monitoring
- Semiconductor Detection
- Bioluminescence Detection
- In Vitro Diagnosis

Technical Specification

Window material	Borosilicate glass			
Photocathode material	Bialkali			
Proportion of cathode	$8 \times 24 \text{ mm}^2$			
Dynode structure	Circular			
Spectral response	300nm~650nm			
	Min.	Typ.	Max.	Unit.
Peak Quantum efficiency		25		%
Peak Photocathode Radiant sensitivity		75		mA/W
Photocathode Luminous sensitivity	50	70		$\mu\text{A}/\text{lm}$
Gain	1×10^7			--
Anode Luminous sensitivity	500	700		A/lm
Anode current		0.8	3	nA

Typical spectral response curve

PMT structure

PMT voltage distribution ratio

电极	K	Dy1	Dy2	Dy3	Dy4	Dy5	Dy6	Dy7	Dy8	Dy9	A
分压比	1	1	1	1	1	1	1	1	1	1	1

K: 阴极; Dy: 打拿极; A: 阳极

K: Cathode; Dy: Dynode; A: Anode
